

Department: General Surgeon

Doctor Name: Dr. Abhishek Katha

Doctor Timings: 1:00 PM to 5:00 PM

Diagnosis:

Breast lumps / abscess: These are often painful, pus-filled lumps within the breast tissue, typically caused by bacterial infections, frequently occurring in breastfeeding women.

Approx Cost: 50K

Sebaceous cyst: Commonly developing on the face, neck, or torso, these are noncancerous cysts beneath the skin, filled with a protein called keratin and are usually harmless but can become inflamed or painful.

Approx Cost: 10K to 15K

Corn Excision: Corns are hard, thickened areas of skin that form as a consequence of rubbing, friction, or pressure on the skin, often on the feet and toes or between toes, requiring surgical removal if they become painful.

Approx Cost: 8K

Nail Excision: This surgical procedure is performed to remove part or all of a nail, typically due to fungal infections, ingrown nails, or nail trauma.

Approx Cost: 8K

Appendicitis: This acute condition involves inflammation of the appendix, characterized by pain in the lower right abdomen, which can become severe and requires immediate surgical removal.

Approx Cost: 70K

Thyroid: Thyroid issues involve the gland in the neck that produces hormones essential for metabolism, growth, and body temperature regulation. Problems can lead to significant health disorders requiring careful management.

Approx Cost: 90K
